

CASE STUDY

Medical Manufacturing

Our medical manufacturing company was introduced to More4Apps when we started using AP Invoice Wizard several years ago. Up until then we had been uploading invoices using DataLoad but it was an increasingly demanding task. AP Invoice Wizard made things so much more efficient that we were able to leverage a lot of the work out to our user community. One thing we've noticed is we rarely get calls from them as they are able to do it all themselves – this frees up a lot of our time and allows us to focus on other things.

We went back to **More4Apps** and asked about some of their other Wizards and were delighted to find out about **ITEM, BOM, ROUTING,** and **ITEM COST WIZARDS,** and now we've started using them too.

Every business is different, and for us we love that More4Apps has an out of the box range of Wizards, and yet are happy to accommodate our requirements for customizations and enhancements.

For example we would like to **categorize our resources,** and **update parts per hour** based on an operation sequence. These are examples of relatively small **customization** requirements. A much bigger request was to have **faster attachment loads,** again More4Apps delivered a solution. We are still exploring and testing **ROUTING WIZARD** and **ITEM COST WIZARD** to see how they can meet our needs.

We've worked with the More4Apps developers from downloading the trial products, determining exactly what we need, and getting a solution to suit our business. The helpful support team from More4Apps has greatly assisted this process.
