

CASE STUDY

ORIGIN ENERGY

Origin Energy had previously implemented a tool for data loading AR Receipts into Oracle. It did not give them the efficiency and validation benefits they needed. The tool consistently created errors and took a large amount of time to complete the processing.

After viewing a live WebEx demonstration, **More4Apps AR Invoice Wizard** and **More4Apps AR Receipt Wizard** were identified as potential tools for loading transactions into Oracle E-Business Suite. They conducted an initial evaluation of the product and the company quickly realized it had the potential to deliver the efficiency gains required. Origin put the product through the company's rigorous testing process. It went through substantial IT and User Acceptance testing and was then approved by the IT group and the company's user group.

The approximate hours taken to implement the products are shown in the table below:

ORIGIN ACTUAL IMPLEMENTATION TIME (hrs) - MORE4APPS

	Testing (hrs)	Implementation (hrs)	Training (hrs)	Documentation (hrs)	TOTAL (hrs)
AR INVOICES	10	2	1	6	19
AR RECEIPTS	12	2	1	4	19

Origin estimated after the first 3 months of using the More4Apps AR Invoice Wizard, the company had achieved a return on their investment of time and money. The More4Apps AR Receipt Wizard realized the ROI within just 2 months of use.

ORIGIN RETURN ON INVESTMENT (ROI) - MORE4APPS

	Transaction Numbers (per month)	Manual Data Entry (days)	Other DL Tool (days)	Using More4Apps (days)	Savings (days)	100% ROI Time & Cost (months)
AR INVOICES	4,000	43	N/A	5	38	3
AR RECEIPTS	25,000	54	18	2	16	2

The primary benefit has been cost savings from faster data entry and data integrity; enabling staff to focus on reconciliation, credit management and other value added tasks. Overall the customer is extremely pleased with the tools. Origin tackled their AR data entry headache and won!
